

Dear TOSOT Partners:

Your TOSOT Heat Pump contains a feature which allows the unit to be set at 46°F (8°C) in the heating mode to prevent freezing during extended unattended period, while saving energy.

To activate this 8°C mode, simply follow these steps:

- 1.) Turn the unit on in the Heat mode.
- 2.) Press the "TEMP" and "CLOCK" buttons on the remote control simultaneously.

When the unit shows the following display, 8°C mode has been activated.

To exit the 8°C mode, press the "TEMP" and "CLOCK" buttons again, or change the operating mode.

If you have any additional questions, please contact your local TOSOT representative.

Sincerely,  
Your TOSOT America Support Team
