

Dear TOSOT Distribution Partners:

We're excited to offer you the APEX Series unitary inverter heat pumps from TOSOT. In addition to the exceptional efficiency and low-temperature heating capacity of the APEX, these units feature standard 24VAC control integration. You can install this unit with the 24V thermostat of your choice, giving you maximum value and flexibility.

Below are the wiring terminal diagrams for both the indoor air handler and outdoor unit. You'll notice that both units feature familiar, standard terminals for use with standard 24V controls.

Note that the indoor unit features an onboard 24VAC transformer, rated at 40VA.

If you have any additional questions, please don't hesitate to contact your TOSOT America support team.
